

Core[®] IaaS Private Cloud

→ Elevate your business to the cloud

Netmode Infrastructure-as-a-Service (IaaS) lets you transition to the cloud while leaving you in control of your business data and ICT expenditure.

Let your IT team focus on supporting strategy and innovative projects that drive business growth without being burdened by the management and cost of on-premise server hardware.

→ Proven, dependable performance

Netmode IaaS customers enjoy access to the cutting edge TasmaNet Core[®] private cloud, built by our parent company to meet the high-performance, high-availability expectations of enterprise and government customers.

Backed by industry-leading service levels and support from the expert team that developed and run the platform, TasmaNet Core[®] is the largest provider of cloud services to the Tasmanian state government.

Netmode IaaS runs on infrastructure from our world-class partners including HPE, VMware, and Veeam, and is highly redundant, ensuring hardware failures do not impact customer workloads.

→ Manage workloads and expenditure

The TasmaNet Core[®] private cloud portal makes deploying, monitoring, and managing virtual machines easy with customisable approval workflows available to meet your business requirements.

Management tools offer familiar functionality such as power functions, snapshots, and console, while portal dashboards provide one-stop visibility over workload performance, optimisation, and expenditure.

DEPENDABLE PERFORMANCE

The Core IaaS platform is built for enterprise workloads and runs on high-performance HPE server and storage infrastructure.

ONE STOP MANAGEMENT

Deploy, optimise, and monitor your virtual machine workloads in minutes using our custom Core portal interface.

INTEGRATED NETWORKING

Secure and high-speed private networking connects your business sites directly into the Vastnet Core cloud environment.

CONTROL EXPENDITURE

Simple consumption pricing replaces hardware and maintenance cost spikes with one predictable monthly invoice.

END TO END EXPERT SECURITY

We built and support the networks, secure data centre, and integrated Software Defined Networking solution for Core IaaS.
